

FLM AUTO LIFT TABLES AT WORK

For decades **FLM** auto lift tables have been used in commercial laundries.

Why, you may ask, because **FLM** auto lift tables bring the goods up to the employees rather than have the employees bending and reaching for the goods.

This inexpensive, easily maintained and durable piece of laundry equipment lifts the goods up to within easy reach of the person at the workstation. The employee spends less time bending over to reach for an item and more time finishing the item. This will increase employee productivity.

More importantly the auto lift is ergonomically friendly. The less bending an employee does, the less there is a chance of incurring a back injury. At the end of the shift the employee has spent less

energy reaching for the items being finished. This gives the employee more energy to finish more items. It is a fact, the better a person feels at the end of the work day, the better that person feels about their job.

When an **FLM** auto lift table is married to an automated delivery system such as a monorail or negative air drop station, it provides a seamless flow of goods to be finished. The above photograph shows **FLM** auto lift tables working in conjunction with an **FLM** clean monorail.

AUTO LIFT TABLES

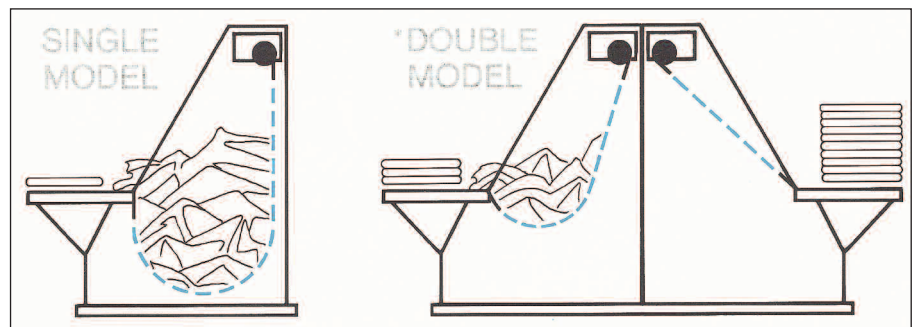

AL-400 • AL-600 • AL-800
